

Breanna Mitchell

Module 4 Challenge

I am able to analyze many points about this data. One of the main points that I noticed is that all of the top 5 schools are Charter schools, while all of the bottom 5 schools are District schools. I was able to analyze that there are a larger amount of students in the District schools, they also have a higher school budget compared to Charter schools. I think this speaks volumes to the fact that they are the bottom 5 schools, maybe they could take from this data that smaller class sizes work better.

Another thing I was able to analyze was that all of the schools stayed within 80% to 89% for their reading scores by grade. Compared to the math scores for each school by grade which range from 70% to 85%. Ultimately, all of these schools and each grade level have successful reading & math scores per grade level.
